B2B Diamond Jewellery Design House

Design Process & Excellence Project

The Paradox of the Market Leader

30-year-old global
diamond jewellery leader.

Deep expertise in co-creation and large-scale production.

Strong legacy of design innovation.

Conversion rates dropped to 8–11%

The talent was strong.

The effort was high.

But results were inconsistent.

The real problem wasn’t aesthetics. It was system alignment.

A Non-Linear Transformation Framework

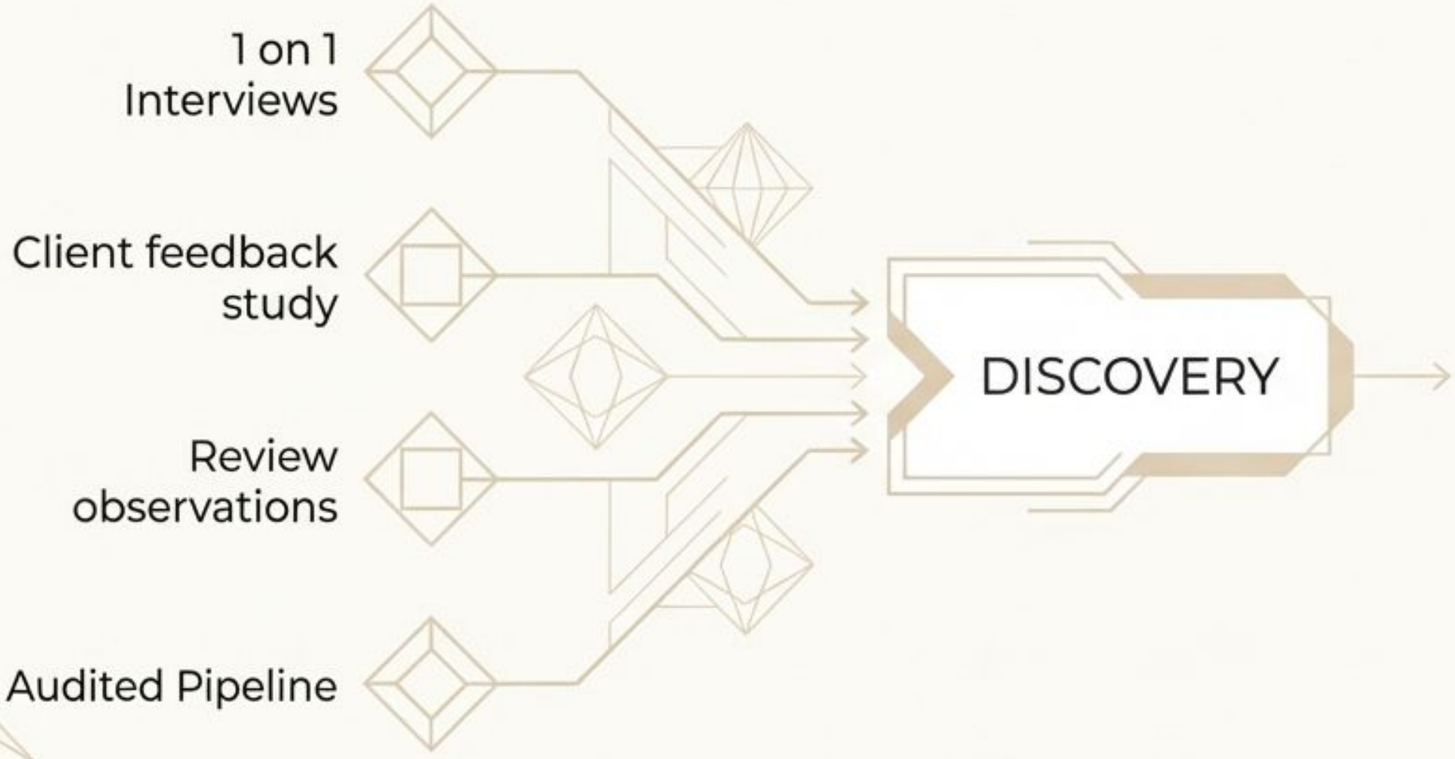
1. Discovery (Empathise & Research)
→
2. Organise (& Define)
→
3. DESIGN (Probable solutions)
→
4. Implementation (& adherence)

But this wasn't linear.

- Problems were re-organised as new patterns surfaced.
- Solutions evolved based on team absorption capacity.
- High-leverage areas were prioritised dynamically.

What Was Really Breaking the System

What surfaced was not lack of capability — but lack of structure.



Findings

- Reviews were subjective.
- Feedback was undocumented.
- Rework was repetitive.
- Performance visibility was low.

Unconsidered leakages in the pipeline led to a false sense of conversion and hit rate.

Categorizing the Chaos

System Gaps

- No structured review rhythm
- No hit-rate tracking
- No accountability loop

Data & Visibility Deficiency

- No parametric feedback
- No measurable scoring system
- No forward capacity planning

Design Process Leakages

- No stage-gates
- No intermediate design checks
- High late-stage rejection

People & Culture Misalignment

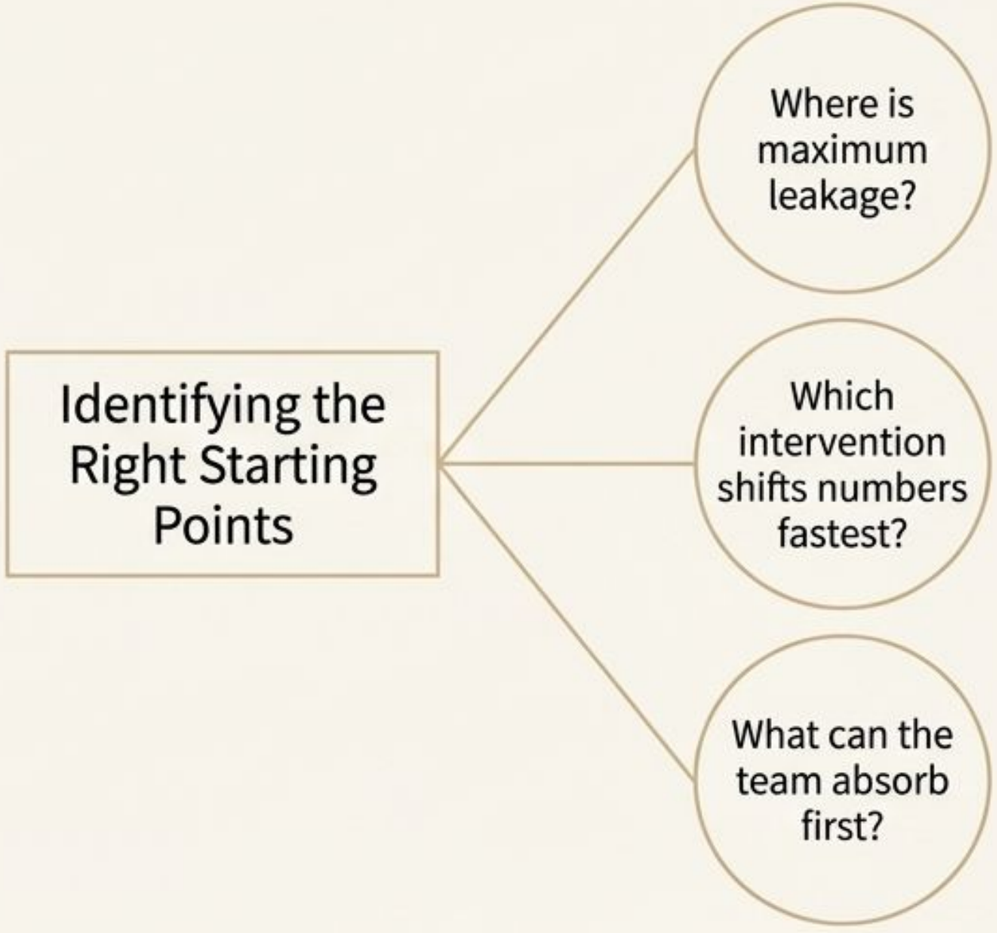
- Over-dependence on senior individuals
- Weak business impact awareness
- Resistance to structured documentation

Mapping Root Causes to Business Impact

Problem Category —> System Gap —> Business Impact

Problem	System Gap	Business Impact
Unstructured reviews	No stage gate/no Rubric	High Rejection and Wasted cycles
Weak Data Tracking	Low to No hit rate visibility	Reactive Decision making
No Intermediate Design checks	Leakage due to Rejection at multiple stages	Low Selection Probability & unclear conversions
Weak Business awareness	Effort misaligned with market	Low conversion despite high work Volume

Sequencing High-Impact Interventions



Instead of solving everything at once, I prioritised high-impact levers:

- Weekly structured design-business review rhythm
- Intermediate 'Doctor-Round' checks
- Rubric-based feedback system
- CRM-backed tracking foundation
- Design Centre & capability roadmap

A Phased Approach to Maturity

Interventions were sequenced based on organisational readiness, cultural acceptance, and behavioural resistance levels.

Phase 1 (Month 1-2)

Stabilise.

Structured weekly design-to-business reviews.

Phase 2 (Month 3-4)

Formalise.

Implement feedback loops and intermediate ‘Doctor Checks’.

Phase 3 (Month 5-6)

Strengthen.

Focus on data visibility & accountability.

Adherence Despite Friction

The Friction

Change created resistance, especially around:

- Documentation discipline
- Structured feedback
- Data tracking
- Accountability culture

The Enablers

Continuous counselling & mentoring

Deep dives into “why impact matters”

Making design-to-business translation visible

Showing weekly movement in numbers

Visibility created belief.
Belief created adherence.

The Business Outcome

From 8–11% → **35–42%**

Not through one magic solution, but through sequenced, impact-led system correction.

Excellence Restored
